- Institutional-grade execution
- Regulatory compliance & oversight
- Daily liquidity UCITS fund

## Luccai

Data Analytics & Signals

- Macro data analytics engine
- Predictive allocation signals
- 50M+ data points processed
- 27 countries, 28 economic factors

# The 60/40 Conundrum

Traditional portfolio construction fails during macro regime shifts. Static 60/40 allocations offer no downside management when markets fundamentally change.

## Static Allocations Fail

### No Downside Management

During regime shifts, fixed-weight portfolios suffer drawn-down losses before managers can react.

Traditional 60/40 provides no mechanism to reduce exposure ahead of macro deterioration.

## Markets Require Adaptation

### Need Dynamic Core

Macro environments shift continuously — inflation, growth, liquidity all demand dynamic positioning.

Institutional investors require a liquid, adaptive core allocation that responds to macro signals.

# From Data to Allocation

01

## Models

Predictive macro models analyze 27 countries and 28 economic factors. 50M+ data points, 800K series, updated 4x/hour.

02

## Scores

Market direction scored for 27 equity, currency and fixed income markets. 75% macro, 12.5% valuation, 12.5% price.

03

## Positions

Scores translated into positions through liquid instruments reflecting market cap weights.

04

## Implementation

Positions rebalanced monthly in the fund, ensuring continuous alignment with macro drivers.

MARKETS

# Dynamic Core in Your Portfolio

*Core manages liquid securities (equities, fixed income, bonds, currencies) • Satellites offer diverse payout structures & liquidity profiles*

# Signals Lead, Markets Follow

Positions are taken ahead of macro regime shifts. Asset prices often move against the portfolio short-term before the thesis materialises.

<b>Growth ↑</b>	→ Equity weight increases	Equities
<b>Inflation ↑</b>	→ Duration reduced, cash added	Fixed Income
<b>Risk-off regime</b>	→ Defensive FX & bonds overweight	Currencies
<b>Yield curve shift</b>	→ Maturity profile adjusted	Fixed Income

# Proven Through Cycles

**2008**

## Avoiding the Crash

Equity reduced to <30%,  
reallocated to fixed income.  
Capital preserved.

**-1%**

vs MSCI World -11%

**2018**

## The Fed Pivot

Increased equity exposure  
ahead of Fed shift from hikes  
to cuts.

**1st Q**

12-month outperformance

**2020**

## Covid-19 Recovery

Extended bond duration,  
overweight tech/consumer.  
Fund at new highs by Sept 2020.

**+9.2%**

2020 full year return

**2022**

## Inflationary Bear Market

Cut equity and long-duration  
bond positions before the 2022  
bear market started, then  
bought shares in Oct 2022.

**Top Decile**

1, 3, & 5 years performance

# Macro Indicators & Performance

Allocator's models are predictive: positions are taken ahead of macro regime shifts. Asset prices often move against the portfolio short-term before the macro thesis materialises. Understanding this timing gap is essential to interpreting interim performance.

## Positions Taken Early

The model detects macro shifts weeks to months before they are reflected in market prices.

## Temporary Divergence

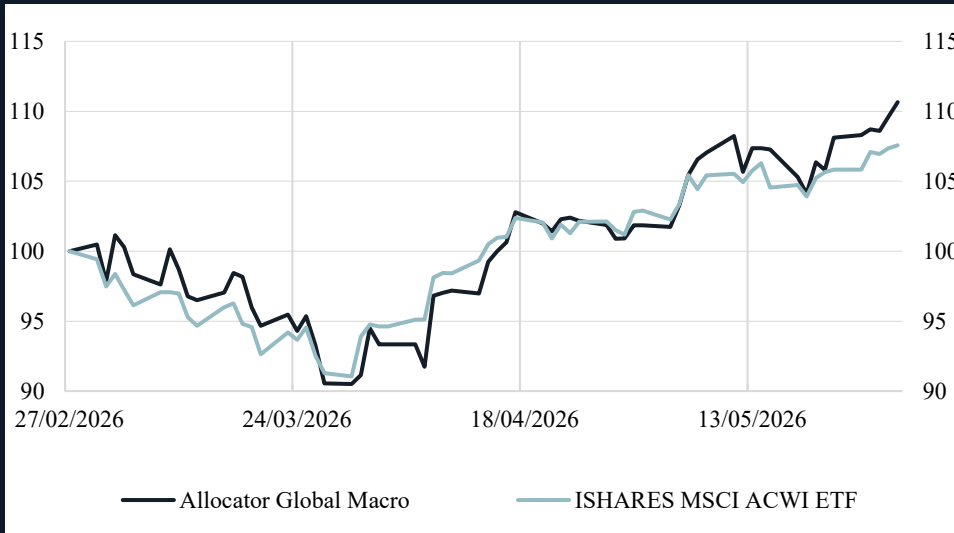

Markets may continue their prior trend while the macro regime is already shifting — by design.

## Macro Convergence

As economic data confirms the regime change, asset prices adjust to the new macro reality.

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	AMC Net YTD	MSCI World YTD
2026	-	-	-8.8	11.7	8.6	-	-	-	-	-	-	-	10.7	7.6
	Cumulative												10.7	7.6

The Fund’s objective is to generate positive returns over the course of the global business cycle, which typically runs for five years, using the Luccai Investment Analytics system and its incorporated AI algorithms to inform its investment strategy.

The Fund aims to achieve its objective by allocating investments in most periods across a range of US, European and Asian equities, using dynamic market weightings from Luccai’s AI-driven macro investment approach. Fund asset classes include equity ETFs, equities, bond ETFs and cash. Luccai’s investment process at certain times in the global cycle will target higher volatility by holding allocations to leveraged ETFs within its limits of 200% exposure. At certain times in the global cycle Luccai’s investment process will hold fixed income and ETFs that short equity indices to target outperformance in equity bear markets.

The Fund’s dynamic weights are taken from AI-supported models that generate the probabilities for each market’s near-term performance, measuring global macro support for corporate earnings, bond markets and central bank liquidity. Luccai’s long-term dynamic asset allocation model will shift over the global cycle from risk on allocations to risk off allocations according to its systematic quantitative investment process.

Note: Alfakraft and Luccai strategy changes were fully implemented as of March-2026 in the fund that launched in February-2020.

## Replace Static 60/40

Dynamic macro core that adapts to regime changes instead of suffering through them.

## Pension Core Allocation

Institutional-grade, daily-liquid UCITS suitable as strategic multi-asset core.

## Complement Alternatives

Liquid, adaptive core allows confident layering of illiquid satellite exposures.

### Performance Attribution Disclaimer

*The track record and performance figures presented are attributable to previous funds — Kestrel, Deuterium and Jupiter — which employed the same systematic macro methodology and quantitative model devised by John Ricciardi. Allocator Global Macro continues this proven approach under the same investment framework and signal architecture.*
